

## RECALL NOTICE

DATE: December 30, 2021

SUBJECT: Calypso Regulator Recall with specific CPN's and serial numbers

Aqualung is conducting a recall of specific batches of Calypso regulators on both Din & Yoke versions. These may have a quality defect due to a variation in the manufacturing process. Only some Calypso regulators with specific CPN's (common part numbers) and serial numbers, as mentioned below, are the affected with this recall. Thanks to our quality team, we identified this variation and decided immediately on the concerned inventories. As of today, the number of regulators potentially impacted is limited to 1545 units.

Location of Serial Number

### Potential issue:

A hole has been drilled out of specification in the high-pressure port, leaving a wall thickness in a vulnerable state. An uncontrollable free flow of the second stage could occur if this thin wall section should rupture under pressure. A pressure test has proved that an affected body will not rupture during a dive, however, we cannot guarantee this in the long term.

### Instructions for consumers:

- Consumers are advised to immediately stop using their Calypso regulators, only if the serial number they own is part of the recall and return to the retailer asking for a replacement free of charge.
- Customers are advised to stop selling their Calypso regulators, only if the serial number they own is part of the recall and send back to the Aqua Lung Group asking for a replacement free of charge.

Should you have any questions please contact your direct sales rep or our customer service at [warranty@aqualung.com](mailto:warranty@aqualung.com) and/or 760-597-5000 - Press 1 for dealer services.

Thank you for your understanding and support.

The Aqualung Team

Common Part & Serial Number of the potentially affected goods.
